Instructions for installing samples

Perform steps 1, 2 and 3 as explained below.

The samples diskette at the back of this book contains:

- ✓ Sample and exercise files referenced in this book.
- ✓ Fonts required for the exercises.
 1. Simply run the file called **INSTALL** from this diskette and follow the instructions.

When properly installed, the following occurs:

- ✓ C:\Retlab\Coreel 12\Samples is created and contains the samples called for in the exercises.
- ✓ C:\Retlab\Coreel 12\Samples\Train is created for you to store files which you create.
- ✓ Sample fonts used in the training are loaded.

Additional Preparations

If you are using this book, you are either:

Offering a training class.

Using the book as a self-tutorial.

In either case, we wrote the book as if you are a starting CorelDRAW for the first time afresh. Of course, it's very possible that you are learning or training on a computer on which CorelDRAW has already been used so it may be necessary to restore the settings back to their original state before beginning the training. It's really quite simple, even if you are new to CorelDRAW.

2. Simply start CorelDRAW and invoke the **F8** key as you do. This will restore CorelDRAW to its original settings.

Finally, the CorelDRAW 12 default interface now includes the *Snap To Objects* feature on. We want you to turn this feature off.

3. Choose **VIEW/Snap To Objects** to uncheck this feature.

We hope you enjoy your RETLAB Training Manual. Feel free to write, e-mail or call us with your comments.

<p>i. WELCOME TO CORELDRAW™ 12 BASICS... ix</p> <p>1. JUST WHAT DOES CORELDRAW™ DO? 1</p> <ul style="list-style-type: none"> • Starting CorelDRAW <p>2. WHEN YOU FIRST OPEN CORELDRAW 5</p> <p>3.
